### 2 Our approach

MMCC® designs its services to use less water and to leave nothing behind that should not be there. We choose methods and products with this in mind, and we report on the result openly.

### 3 Water

PureShield™ supports consistent protected finishes with no mains wash-water connection normally required. Our services are carried out where the vehicle is, using our own supplies.

### 4 Products

We use only what a job needs and avoid over-application. We read each product's safety data sheet before using it, as set out in our COSHH Policy.

### 5 Waste and runoff

Chemical waste and contaminated materials are handled as set out in our Waste Management Policy. Our method is designed so that no chemical runoff enters drains or watercourses.

### 6 Reporting assumptions

Environmental figures are calculated from validated MMCC® service records using published methodology. Each car serviced this way saves approximately 150 litres of water. Totals come from the live count of MMCC® service records, and the other figures are derived from the same basis using the factors shown on the MMCC® ESG report. They are estimates for sustainability reporting support, not guaranteed environmental outcomes, and they vary with vehicle condition, site constraints, service mix and reporting baseline.

### 7 Review

We review this policy at least once a year, and whenever our methods, products or reporting method change.
