2 Our approach

All chemical waste and contaminated materials are disposed of in accordance with UK environmental regulations.

3 Chemical waste

Unused product and empty containers are disposed of as the product's safety data sheet and UK waste rules direct. Nothing is poured into drains.

4 Contaminated materials

The microfibre cloth used on tyres and rims is single use and is binned after each vehicle. Other materials that have taken up product are handled in line with the safety data sheet and UK waste rules.

5 Runoff

Our method is designed so that no chemical runoff enters drains or watercourses. Spills are contained and wiped up straight away.

6 Material collected from vehicles

Dust, debris and anything else collected during vacuuming is dealt with as set out in our Vehicle Contents Policy. It is left with the client and is not removed by MMCC®.

7 Review

We review this policy at least once a year, and whenever a product or method changes.
