2 Our approach

MMCC® follows the Control of Substances Hazardous to Health Regulations 2002 (COSHH). Before a product is used on a job, we read its safety data sheet, decide how it can be used safely and choose the safest suitable option. Where a product is not needed, we do not use it.

3 Products and dilution

Products are used ready to use, or diluted as the maker's instructions direct. For PureShield™ and PureShield Plus™, our own written method directs how they are prepared and used. Nothing is mixed with anything else unless the instructions say so.

4 Safety data sheets

We hold a current safety data sheet for each product we use and keep them where the team can reach them. The sheets available to read are linked in the MMCC® Toolkit, and any others are sent on request.

5 Protective equipment

Gloves, eye protection or other protection are worn where a safety data sheet or our method calls for them.

6 Storage and transport

Products stay in their original or clearly labelled containers, closed, upright and out of heat and direct sun. They are kept separate from food and drink.

7 Spills and waste

Spills are contained and wiped up straight away. Used cloths and empty containers are disposed of in line with UK waste rules, and nothing is poured into drains.

8 First aid and emergencies

Eyes	Rinse with clean water for several minutes.
Swallowed or feeling unwell	Follow the product's safety data sheet and call NHS 111.
Emergency	Call 999.

First aid advice for each product is on its safety data sheet.

9 Training and review

Everyone who uses the products is shown how to use them safely before they start. We review this policy and our assessments at least once a year, and whenever we change a product or a method.

10 Revision history
